AYUSH KRISHNAN. P

Bangalore, India | +919901249572 | ayushkrishnan77@gmail.com | linkedin.com/in/ayush-krishnan-62a242292

Summary

Cybersecurity professional and current VAPT Intern at HonestCyber, combining CCNA 200-301 training with hands-on VAPT, malware analysis, SOC, and GRC skills from the CySecK Cyber Security Finishing School (Govt. of Karnataka / IISc). Built an LLM-based penetration testing platform, enterprise-grade malware detection software, and AI-driven network monitoring tooling (SNMP, Syslog). Proficient in Python, Linux, and network automation. Targeting VAPT / Penetration Tester, SOC Analyst, NOC Engineer, and L1/L2 Security Support roles.

Education

T John Institute of Technology — *B.E. in IOT, Cyber Security including Blockchain* | CGPA: 9.0 Expected Jul 2027

Experience

VAPT Intern — HonestCyber Jul 2026 – Present

Cybersecurity company focused on offensive security — VAPT, malware analysis, and AI-driven security tooling for enterprises.

- Built an **LLM-based penetration testing platform** that automates recon, vulnerability scanning, and exploit validation, and generates prioritized findings with remediation guidance for analysts.
- Developed **enterprise-grade malware detection software** combining static/behavioural analysis with AI-based classification to flag malicious files, payloads, and IOCs for rapid triage.
- Performed VAPT on web applications, APIs, and networks (OWASP Top 10, Burp Suite, Nmap, Metasploit), documenting vulnerabilities with severity ratings and fix recommendations.

Cybersecurity and Cybercrime Research Intern — IIMB Sep 2026 – Dec 2026

- Worked on malware link scanning and AI-based fraud detection for messages and calls.

Cyber Security Finishing School Trainee — CySecK, Govt. of Karnataka / IISc, Bengaluru Aug 2026 – Sep 2026

- Hands-on training in SOC operations, SIEM, IAM/PAM, GRC, Zero Trust, threat hunting, and incident response; practiced VAPT and web application exploitation (OWASP Top 10, SQLi, XSS) using Burp Suite and Metasploit.
- Covered network security hardening (VLAN security, firewall/IDS/IPS & honeypots, OSINT & recon, email security) alongside cloud, endpoint, and IoT security, and red & purple team adversary simulation (MITRE ATT&CK) under industry SOC practitioners.

Skills

Programming Languages: Java, Python, JavaScript, C, SQL, HTML, CSS
Networking (CCNA 200-301): LAN/WAN, Router & Switch Configuration (Cisco), VLANs, Trunking, STP/RSTP, EtherChannel, Static Routing, IPv4/IPv6 & Subnetting, NAT/PAT, DHCP/DNS/SSH, SNMP, Syslog
Network & Endpoint Security (CCNA): Port Security, WPA2/WPA3, Firewall Concepts, IDS/IPS & Honeypots, Site-to-Site VPN basics, Wireless Security, Endpoint Security, IoT Security
SOC & Security Operations: SIEM/SOC Operations, Incident Response, IAM/PAM, GRC, Zero Trust (ZTNA), Red Teaming & Purple Team (MITRE ATT&CK), Threat Hunting, OSINT & Recon (Shodan, theHarvester, Maltego), Email Security (SPF/DKIM/DMARC)
VAPT & Web Security: Vulnerability Assessment & Penetration Testing, OWASP Top 10, SQL Injection, XSS, CSRF, Burp Suite, Web Application & API Pentesting
AI & Malware Analysis: LLM-based Pentest Automation, AI-driven Threat Detection, Static & Behavioural Malware Analysis, IOC Extraction, Machine Learning (scikit-learn)
Automation & Tools: Python, Ansible, REST APIs, Cisco Packet Tracer, Wireshark, Nmap, Linux, Windows
Cloud & Security Tools: AWS (IAM, S3, VPC), Cloud Security, Metasploit, Cryptography & PKI, TLS/IPSec
Backend, Databases & Frameworks: FastAPI, Flask, JDBC, MySQL, DBMS, React, MERN Stack, SSE Streaming, Figma

Certificates

- **Cisco Networking Academy** CCNA 200-301 Training (Full Course) — Network Fundamentals, LAN Switching, IP Connectivity, IP Services, Security Fundamentals, Network Automation & Programmability
- **Cisco Networking Academy** Network Technician Career Path (CCST Networking) — Networking Basics, Device Initial Configuration, Network Addressing & Troubleshooting, Network Support & Security
- **NPTEL** Cryptography and Network Security — PKI, TLS, IPSec, Symmetric/Asymmetric Encryption, Digital Signatures
- **NPTEL** Programming, Data Structures and Algorithms in Python; **NPTEL** Introduction to Machine Learning

Projects

- **Network Log Analyzer** GITHUB — Real-time network monitoring platform (Python/FastAPI) ingesting Syslog, SNMP traps, AWS VPC Flow Logs, Firewall & DNS logs — replicating NOC/L2 monitoring workflows. Isolation Forest ML + LLaMA 3.1 (Groq) for automated incident classification and root cause narratives; React 18/SSE live alerting dashboard.
- **CloudGuard-AI** GITHUB — AI-powered network & cloud security auditing tool inspecting AWS IAM, VPC security groups, and network ACLs for misconfigurations. Automated compliance to CIS Benchmarks & NIST CSF; NLP-driven remediation playbooks for L2 network security incident response.
- **Static Malware Analysis Toolkit for PDF Files** GITHUB — Static analysis pipeline detecting IOCs in PDFs — exploits, obfuscated streams, embedded JavaScript — using pdfid, peepdf, and custom Python scripts for rapid SOC/L1 security triage.

Achievements

- **3rd Place, *Hack2Hire 1.0* — TJIT 2026** (AI/Cybersecurity Hackathon by DEPT OF CSE, TJIT)
- **1st Place, *Code Decode* — Parichay 3.1** (Competitive coding & problem-solving event by DEPT OF AIML, TJIT)
- **1st Place, *Code Sprint* — Envyus 2K25** (High-intensity coding challenge by DEPT OF ISE, TJIT)
